 - Settings
 - Tips & Shortcuts
-

1. Getting Started

Launch the app by opening **Jewelry ERP** from the Start menu (or the desktop icon). The app runs fully offline on your computer - no internet is required except for optional live-rate sync and WhatsApp messaging.

- The window opens to the **login screen** (or the **setup wizard** the very first time).
- All your data is stored locally in an encrypted-capable SQLite database on this PC.
- The app auto-saves a backup when you close it (if enabled in Settings).

Default login (out of the box):

Username	Password	Role
`admin`	`admin1234`	Admin

Change this password after first login (Staff User Management) for security.

2. First-Time Setup

Only appears the very first time, when no admin account exists yet.

- **Step 1 - Organization details:**

- **Shop Name** (e.g. "Shree Jewellers")
 - **Contact Number**
 - **GSTIN** (optional - must be a valid 15-character GSTIN if entered)
 - **Billing Address**
 - Click **Continue**.
 - **Step 2 - Create Super Admin:**
 - **Admin Username**
 - **Password** (minimum 8 characters)
 - **Confirm Password**
 - Click **Finish Setup**.
 - You are logged in automatically as the Admin and taken to the dashboard.
-

3. Login, Logout & Screen Lock

Login

- Enter your **Username** and **Password**.
- Click **Sign In**.
 - Admins/Managers land on the **MIS Dashboard**; other staff land on the **Dashboard**.
 - Wrong credentials show: **"Incorrect username or password."**

Screen Lock (protects the till when you step away)

- Click **Lock** in the top header, **or** the app auto-locks after **15 minutes** of inactivity.
- A lock overlay appears - type your password to unlock and return to exactly where you were.

Logout

- Click **Logout** at the bottom of the left sidebar to end your session and return to Sign In.
-

4. Dashboards

There are two dashboards in the left sidebar:

MIS Dashboard (Admin/Manager only) - business analytics: today's sales, outstanding dues, stock value, top movers, and trend cards. Use this for an at-a-glance health check of the shop.

Dashboard (all staff) - the operational screen combining the **Daily Rates** control bar (top) and the **live inventory table** (below). This is the screen counter staff use most.

5. Daily Gold/Silver Rates & Live Rate Sync

Set here once each morning - these rates drive all billing prices. (**Admin only; staff see rates read-only.**)

Set rates manually

- Go to **Dashboard**.
- In the **Daily Rates Control** bar, type today's **Gold 24K / 22K / 18K / Silver** rates.
- Click **Save & Update Rates**. The **Last Synced** time updates.

Sync live MCX rates (optional)

- Click **Rate API Key**, paste your gold-rate API key, and save. The status dot turns **green**.
- Click **Sync Live MCX Rates** - the app fetches current market rates automatically.

The API key is stored per-shop inside the app (not an environment variable). You only enter it once.

6. Inventory & Item Master

View, search, and edit your stock.

- Go to **Inventory** (or use the table on the **Dashboard**).
- **Filter** using the bar: search by barcode/HUID, or filter by **Category, Metal, Purity, Status** (IN_STOCK / SOLD / IN_MEMO).
- The metric cards show **Items In-Stock**, total **Gold Weight**, and **Silver Weight**.

- Click **Edit** on any row to change item details (weights, making, location, price) -> save.
- Click **Tag** on a row to preview/print that item's barcode label.

To **add** new items, use Barcode / Tag Generation (next section).

7. Barcode / Tag Generation

Create barcoded tags for new stock and verify physical stock against the system.

Create tags

- Go to **Barcode** -> **Create Tags** tab.
- (Optional) choose an **Item Template** to pre-fill common fields, or click **+ New Template**.
- The **Next Tag** number auto-fills. Set:
 - **Prefix, Qty, Sale Mode** (Weight-wise or Quantity-wise), **UOM** (Gram/Carat/Piece).
 - **Unit Price** (quantity-wise items only).
 - **Category, Design, Metal, Purity**.
 - **Gross / Stone / Black-Bead** weights -> **Net** and **Fine** weight calculate automatically.
 - **Making Type & Rs , Hallmark Rs , HUID, Location**.
- Click **Create Barcode Tags**. New rows appear, each with a **Label** print link.
- Click **Label** to print the physical tag for each piece.

Verify physical stock

- Go to the **Verify Stock** tab -> **Start Verification**.
 - Scan each item's barcode into the box -> **Scan**.
 - Live counts update: **Expected / Scanned / Found / Missing / Unknown**, with a missing-items list.
 - Click **Complete** -> **Print Report** to file the audit.
-

8. Customers (CRM)

- Go to **CRM**.
- Click **Add Customer** and fill the form:
 - **Name** (required), **Phone** (required, 10-15 digits), WhatsApp number, Email, GSTIN.
 - Address, Area, Taluka, District.
 - Birthday, Anniversary (used for reminders), PAN, Aadhaar, Ring size.
 - **Loyalty enrolled** toggle, **Opening balance** (Debit/Credit) if they owe or are owed.
- Save. Search any customer with the **Search by Name or Phone** box.
- Click a customer to **edit** details or view their balance and history.

You can also add a customer on the fly during billing - see POS Billing below.

9. POS Billing - Making a Sale

The core daily screen. Three columns: **Customer (left)** - **Cart (center)** - **Payment (right)**.

- Go to **POS Billing**.
- **Select the customer (left):**
 - Search an existing customer by name/phone, **or**
 - Type a name and press Enter for a quick **Walk-in**, **or**
 - Click the **+** button to add a new full-KYC customer.
 - Optionally collect **Old Dues**, redeem **Loyalty Points**, and set **Invoice Details** (prefix, manual number, due date, salesman, "GST Not Required" checkbox).
- **Build the cart (center):**
 - **Scan the item's barcode** (it auto-adds), or type the barcode/HUID in the box and press **Enter** (use this when the scanner is unplugged or a tag is damaged).
 - **Quick Bill** (item not yet in inventory): click **Quick Bill** to create and add an untagged item on the spot. Two modes:
 - **Weight-wise** - Category, Metal, Purity, Gross/Stone weight, Making. For **gold the HUID is required** (enter the 6-character HUID stamped on the piece - see the hallmark note below).
 - **Flat price** - a Description and a fixed amount, for a non-gold or fixed-price article. The item is created as live

stock and added to the cart; checkout marks it **SOLD** like any other.

- Each row lets you adjust the **Metal Rate** and **Making** charge, or remove the line (trash icon).
- **Old Gold exchange:** under URD, enter Description / Tunch / Weight / Rate -> **Add** to deduct it.

Gold & hallmarking (HUID): Indian BIS law allows a gold item to be sold only if it is hallmarked - it must carry a valid 6-character **HUID** and a hallmarked status. Normally tagged stock is hallmarked through the BIS flow. For a Quick Bill gold item, entering the HUID stamped on the piece marks it hallmarked so it can be billed. **Gold with no HUID cannot be sold at POS** - get it hallmarked first, or bill it as **Flat price**.

- **Take payment (right):**

- Review **Total Gross**, apply a **Total Discount**, see **Net Payable**.
- Enter a **split payment**: Cash / UPI / Card / Udhari (credit), with reference fields.
- **Balance Remaining must reach Rs 0** to enable checkout.

- **Compliance:** if cash is **Rs 2,00,000 or more**, or any old-gold (URD) line is present, a red panel requires **PAN, Aadhaar (12 digits)**, an ID document upload, and a selected customer. Fill these to proceed.

- Click **Checkout**.

- If any amount is on **Udhari (credit)**, confirm the "Save on Credit?" dialog.

- The **Print** window opens - choose **A4 (GST)**, **A5**, or **Thermal (80mm)**, use a saved template, or **Send via WhatsApp** (if the customer has a phone number).

After checkout the sold items become **SOLD** in inventory, the sale posts to the Day Book, any credit shows in the customer's balance, and loyalty points are awarded.

10. Quotations

To give a price estimate without selling (no stock is reduced):

- Build the cart in **POS Billing** exactly as for a sale.
- Instead of Checkout, click **Save as Quotation**.
- The quotation is saved and can be printed/shared. Convert it to a sale later by re-billing.

11. Old Gold Exchange & URD Vouchers

During a sale: use the **URD / Old Gold Exchange** section in the POS cart (see step 3 above).

Standalone purchase of old gold: go to **URD Voucher**, enter the customer and old-gold details (description, tunch, weight, rate) to create a standalone unregistered-dealer voucher and pay the customer for their gold.

12. Customer Orders

Book made-to-order items (e.g. a custom ring):

- Go to **Order Booking**.
- Select/add the customer, enter the item specification, expected delivery date, and advance paid.
- Save the order. Track and fulfil it from the same screen; convert to a sale on delivery.

13. Returns

Handle sales returns and purchase returns:

- Go to **Returns**.
- Choose the return type (sales or purchase) and look up the original invoice.
- Select the line(s) being returned, confirm the refund/credit, and save. Stock and ledgers adjust.

14. Approval / Jangad Memo

Send items out "on approval" (memo) without selling them:

- Go to **Approval Memo**.
 - Select the customer and add the items leaving the shop.
 - Save the memo - those items show **IN_MEMO** in inventory.
 - When items return or sell, close the memo accordingly.
-

15. Purchase Invoices

Record stock bought from suppliers:

- Go to **Purchase**.
 - Select/add the supplier, enter invoice number and date.
 - Add line items (metal, weight, purity, rate, making, GST).
 - Save - stock increases and the supplier ledger updates.
-

16. Metal Loan (Unfixed Purchase)

Record **gold borrowed from a supplier** where the rate is fixed later:

- Go to **Metal Loan**.
 - Select/add the **Supplier**, enter **Purity %** (e.g. 99.99) and **Gross grams** taken -> record.
 - Later, when you settle, open the entry and enter the **Fix Rate** (e.g. 7250) to price the metal.
-

17. Girvi - Pawn / Moneylending

Lend money against pledged gold:

- Go to **Girvi** -> **Issue New Loan**.
 - Select the **Customer**; the **Loan Number** auto-fills (e.g. GRV-0001).
 - Enter the **Principal Amount** (validated against loan-to-value), and pick the Cash/Bank ledger.
 - Capture the borrower's **Photo** and **Thumbprint/Biometric** (webcam, upload, or scanner).
 - Cash loans over **Rs 2,00,000** require PAN + Aadhaar.
 - Issue the loan -> print the **Pavati / Pawn Receipt**.
 - **Repayments**: open **Active Loans & Repayments**, select the loan, and record payments - the outstanding balance reduces.
 - **Closed/Defaulted**: the **Defaulted/Settled** tab lists loans that are settled or in default.
-

18. Karigar / Manufacturing

Track raw metal issued to artisans (karigars) and finished jobs received back.

Issue raw metal

- Go to **Karigar** -> **Issue Raw Metal**.
- (Optional) link a **Customer** for a custom order.
- Pick the **Artisan**, or click **+ Add Karigar** (name, phone, specialty) to create one.
- Enter Job Name, Target Purity %, Target Weight, Metal Type, **Gross Weight Issued**, and **Purity/Tunch** -> the **Fine Gold Equivalent** shows live.
- Click **Issue Raw Metal**.

Receive finished job

- Go to the **Receive Finished Job** tab and select the active job.
- Enter **Final Gross**, Stone/Less, **Scrap**, wastage mode/value, and **Labour Charge**.
 - The reconciliation engine flags **"EXCESS METAL LOSS"** if the numbers don't balance.
- Click **Receive Finished Job**. (Or **Cancel Job** to return the metal.)

Karigar ledgers

- Go to the **Karigar Ledgers** tab and select a karigar.
 - View the **Metal Ledger** (fine-gold owed) and **Cash Ledger** (labour pending).
 - Click **Transfer to Barcode** on a received piece to turn it into saleable, tagged stock.
 - **Print Slip** for any transaction.
-

19. Repairs

Log repair and service jobs:

- Go to **Repairs**.
 - Select/add the customer, describe the repair, weight in, estimated charge, and promised date.
 - Save and track status; bill the customer on completion.
-

20. Gold Saving Schemes

Run customer savings schemes that mature into a gold purchase.

- **Gold Scheme** - enrol a customer in a scheme and record monthly **installments**.
 - **Scheme Builder / GSS Schemes** (Admin/Manager) - define scheme rules (duration, bonus, payout terms).
 - At maturity, convert the accumulated value into a sale (the credit applies in POS).
-

21. Accounts & Day Book

Your financial control screens:

- **Day Book** - every transaction for a chosen day (sales, purchases, receipts, payments).
- **Accounts** - ledger view across customers, suppliers, cash/bank, metal accounts.

Use these to reconcile cash at day-end and confirm that sales, credits, and metal movements posted correctly.

22. GST Reports & e-Documents

For tax compliance (Admin/Manager):

- **GST Reports** - generate GST summaries for filing (GSTR-ready figures).
- **GST e-Docs** - create **e-Invoices** and **e-Way Bills** for qualifying transactions.

Select the period/transaction, generate, then export or print.

23. Reminders & Receivables Ageing

- Go to **Reminders**.
 - View outstanding receivables grouped into **ageing buckets** (e.g. 0-30, 31-60, 60+ days).
 - Use this to follow up on Udhari (credit) balances; pair with Messenger to send reminders.
-

24. Messenger & CRM Automation

- Go to **Messenger**.
 - Set up and trigger automated customer messages - payment reminders, birthday/anniversary greetings, festival offers.
 - Messages can be sent over WhatsApp to customers with a saved phone number.
-

25. Report Builder & Print Templates

(Admin/Manager)

- **Report Builder** - build custom reports by choosing data fields, filters, and grouping.
 - **Print Templates** - design the layout of invoices, labels, and receipts (A4, A5, thermal), including which fields print and the shop header.
-

26. Refinery Management

Track metal sent for refining:

- Go to **Refinery**.
 - Record a batch sent out (gross, expected purity), and reconcile the fine gold returned.
-

27. Backup & Recovery

Protect your data. **(Admin only.)** Four tabs:

- **Backup** - choose a target (**LOCAL / USB / CLOUD**), optionally set an **encryption passphrase**, and run a backup. The screen shows when the last backup ran.
- **History** - a log of past backups with checksums. To restore: select a backup, enter its passphrase, and restore.
- **Schedule** - enable **auto-backup**, set the interval (hours), target folders, cloud URL, how many backups to keep, and **Backup on Exit**.
- **Recovery** - view the crash log and database state, and run an **integrity check**.

The app applies any pending restore on startup (Windows-safe) and can back up automatically when you close the window.

28. Staff User Management & Roles

(Admin only.) Go to **Users** to create staff accounts.

Four roles, each with different access:

Role	Access summary
ADMIN	Everything, including Backup & Recovery and User Management.
MANAGER	All operations + MIS Dashboard, Day Book, GST Reports/e-Docs, Scheme Builder, Refinery, Report Builder, Print Templates. No Backup/Users.
ACCOUNTANT	Standard operational screens.
COUNTER_STAFF	Standard operational screens; **cannot edit gold rates** (read-only).

To add a user: **Users** -> create -> enter username, password, and role. They sign in with those credentials and see only what their role permits.

29. Settings

Configure shop-wide preferences:

- **Firms Manager** - your shop/firm master data.
- **E-commerce Sync & Webhook** - sync URL + secret; preview a catalog export.
- **Loyalty Earning Rules** - earn mode (per Rs 100 spent / per gram of gold) and point values.
- **Print Language** - English / Marathi / Hindi / Gujarati (affects printouts).
- **Tally Prime XML Gateway** - enable, set gateway URL and company name to push to Tally.

*Gold rates are set on the **Dashboard**, not here.*

30. Tips & Shortcuts

- **Barcode scanner** works almost everywhere - scan to add items in POS, Barcode Verify, etc.
- **Lock the screen** (top header) whenever you leave the counter.
- **Set rates first thing each morning** - all billing depends on them.
- **Back up before closing** - keep "Backup on Exit" enabled.
- **Walk-in sales** - type a name and press Enter in POS; no need to create a full customer.
- **Compliance**: have PAN + Aadhaar ready for cash sales >= Rs 2,00,000 or any old-gold exchange.
- The app is **offline-first** - it keeps working without internet; only live rates and WhatsApp need a connection.

End of guide. For day-to-day operation, the screens you'll use most are: Dashboard (rates), POS Billing, Inventory, CRM, and Day Book.
